

Genetics, Economic Choices, and Income

Leandro S. Carvalho
(University of Southern California)

Intro

Know a lot about how environmental circumstances contributes to SES;
know much less about genetics' contribution

Research program that ignores genetics cannot provide full picture

Study *causal* relation between genetics, economic choices, and income

Genetic measure: polygenic index for educational attainment (EA PGI)

Identification: one's PGI is random conditional on PGIs of one's parents

Polygenic Index (PGI)

Polygenic index (PGI) is weighted average of one's genotypes:

$$PGI_i = \sum_j x_{i,j} w_j$$

Weights w_j come from GWAS (Okbay et al. *forthcoming*)

EA PGI explains 12% of cross-sectional variation in EA

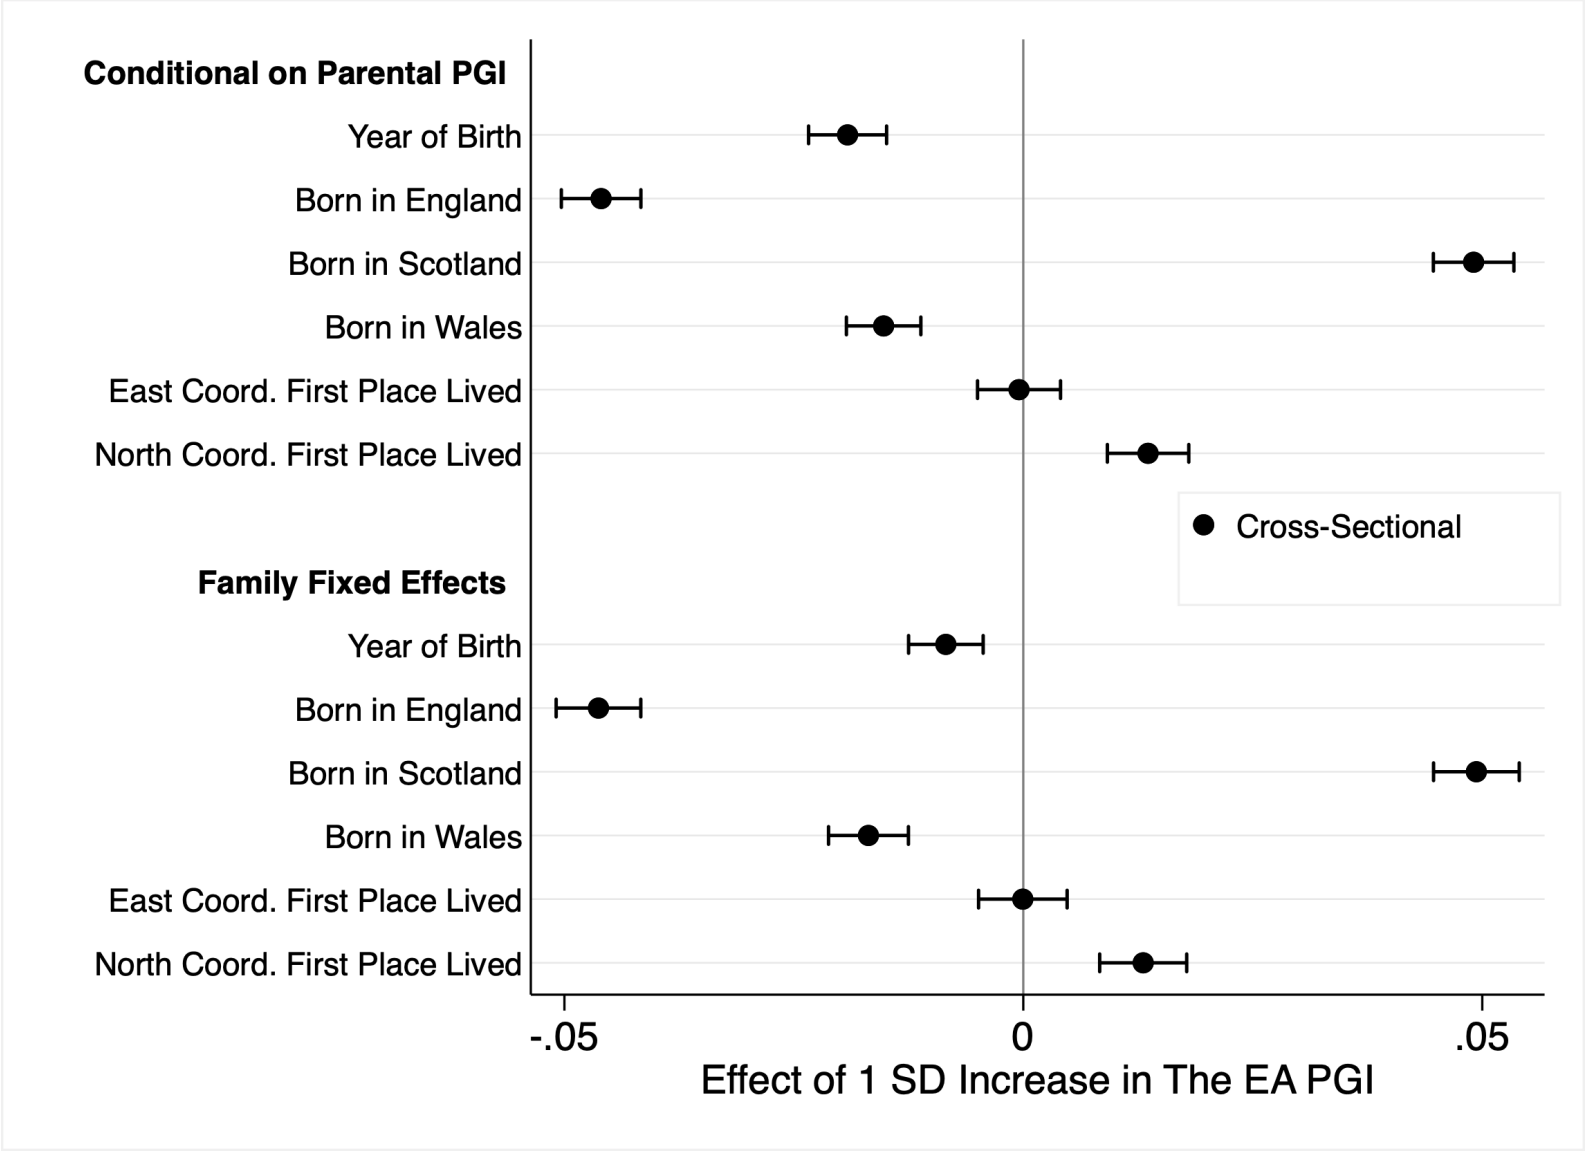

Data & Empirical Strategy

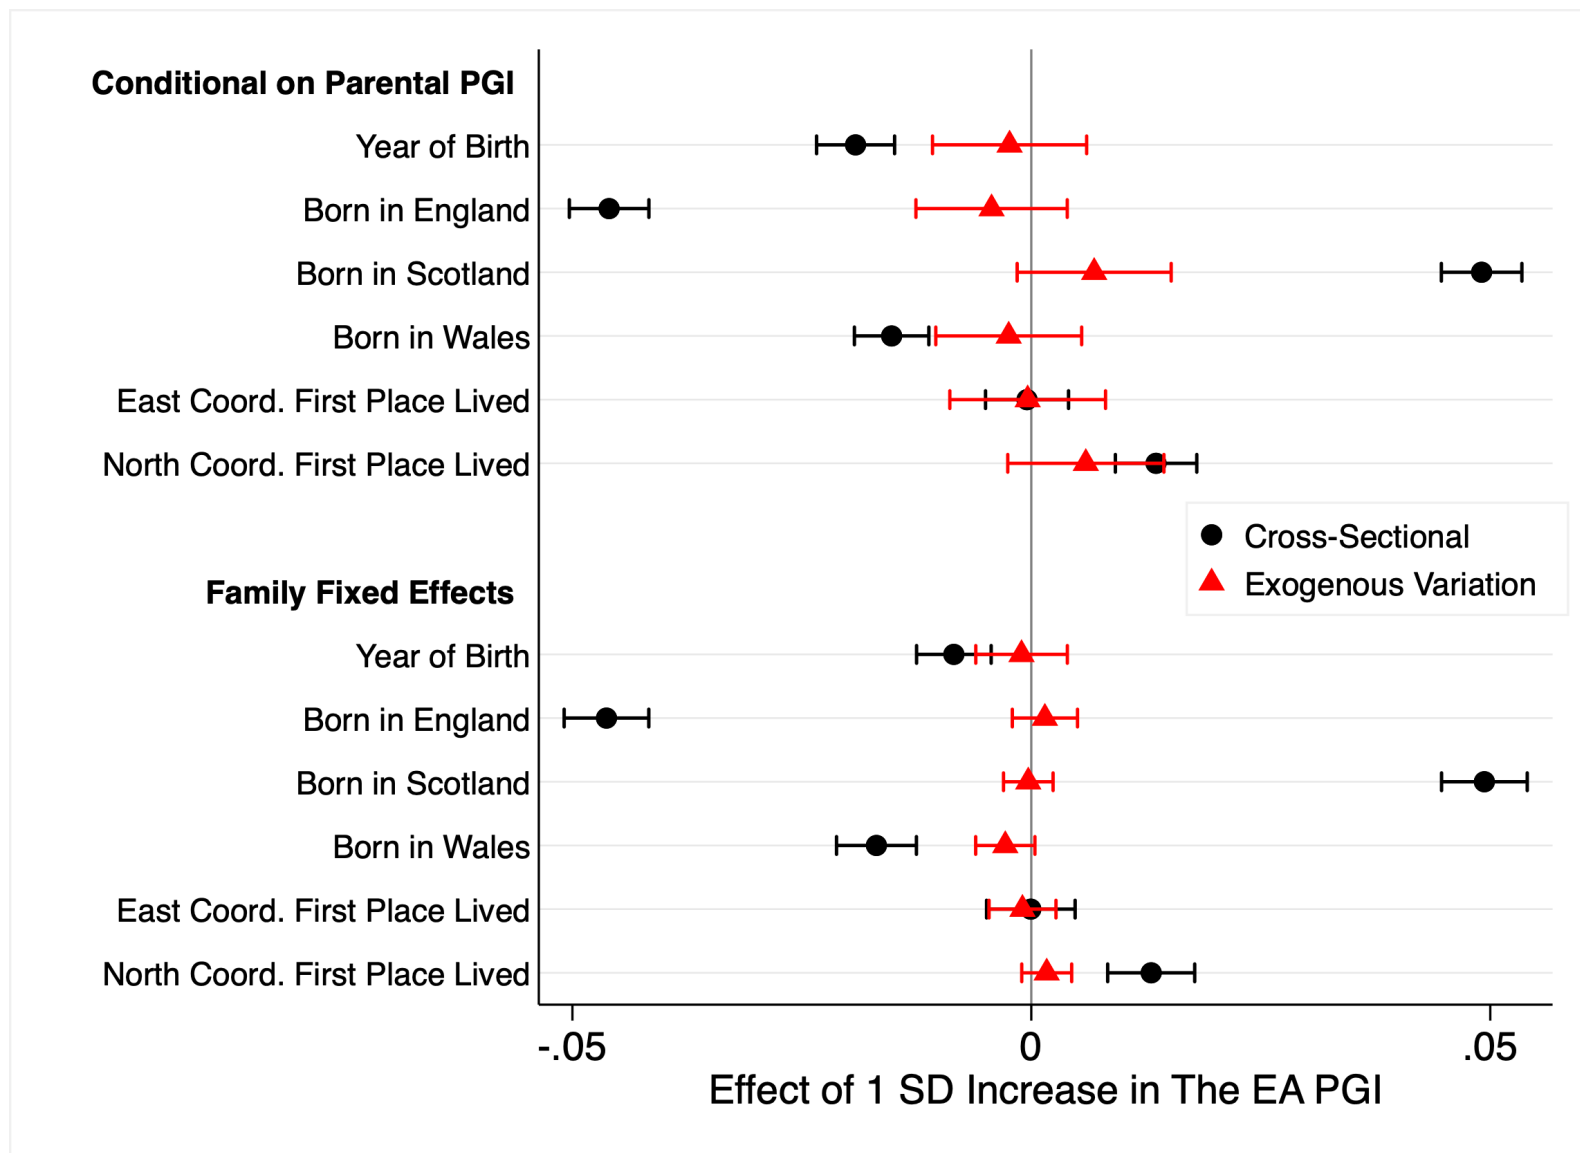

UK Biobank = (N \approx 44,000)

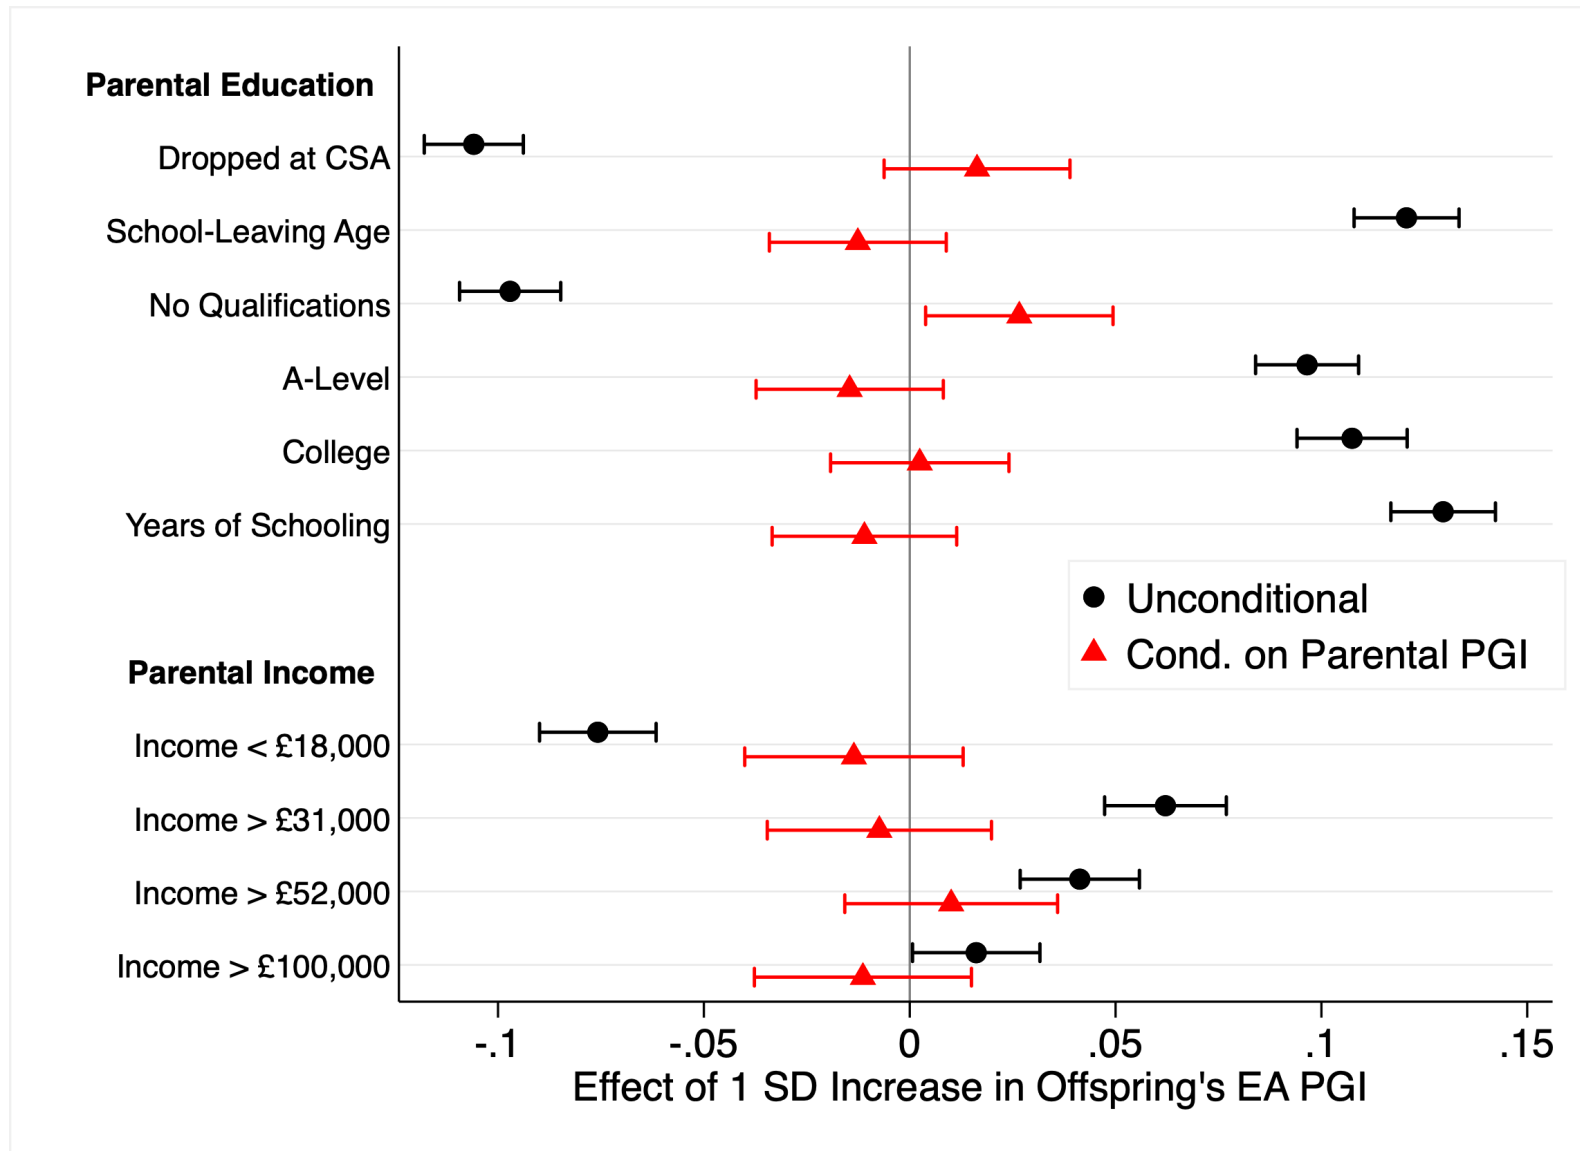

Restrict to participants with European genetic ancestries

$$Y_i = \alpha + \beta PGI_i + \gamma Parental\ PGI_i + u_i \quad (1)$$

β provides unbiased estimate of causal effect of EA PGI

Empirical Strategy – Cont.

$$PGL_i = \gamma_0 + \gamma_1 \textit{Parental PGL}_i + \varepsilon_i \quad (2)$$

Empirical Strategy – Cont.

$$PGI_i = \gamma_0 + \gamma_1 \text{Parental } PGI_i + \hat{\varepsilon}_i$$

*Residualized
EA PGI*

Empirical Strategy – Cont.

$$PGI_i = \gamma_0 + \gamma_1 \text{Parental } PGI_i + \hat{\varepsilon}_i$$

*Residualized
EA PGI*

Most outcomes are binary and ε_i is continuous

Instead of $E[Y | \varepsilon]$, show $\Pr(\varepsilon | Y)$

EA PGI

Educational
Choices

EA PGI

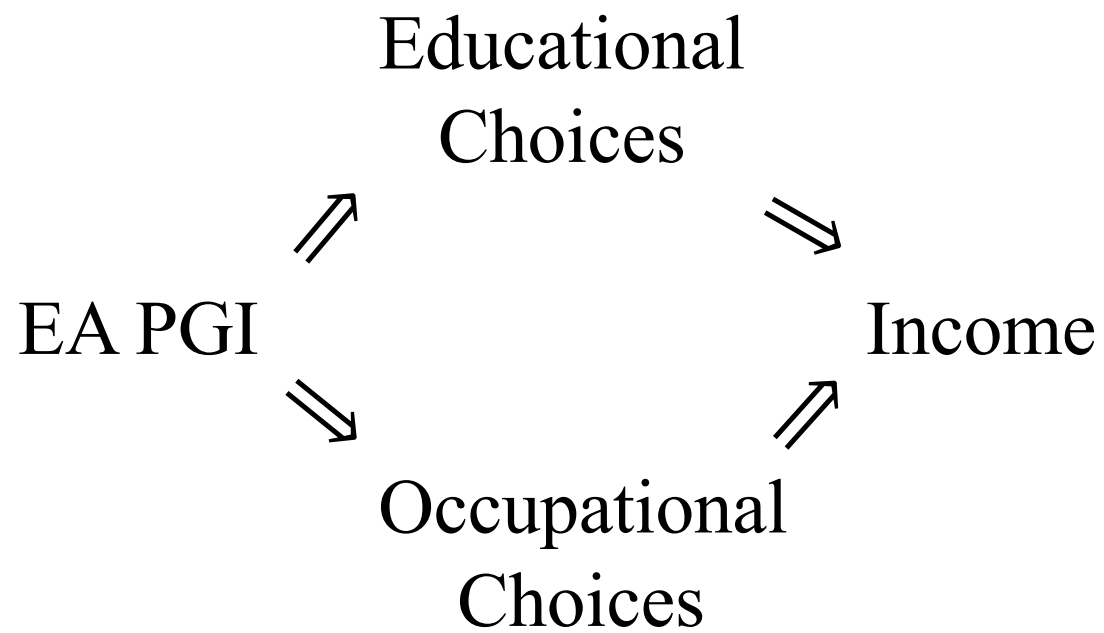

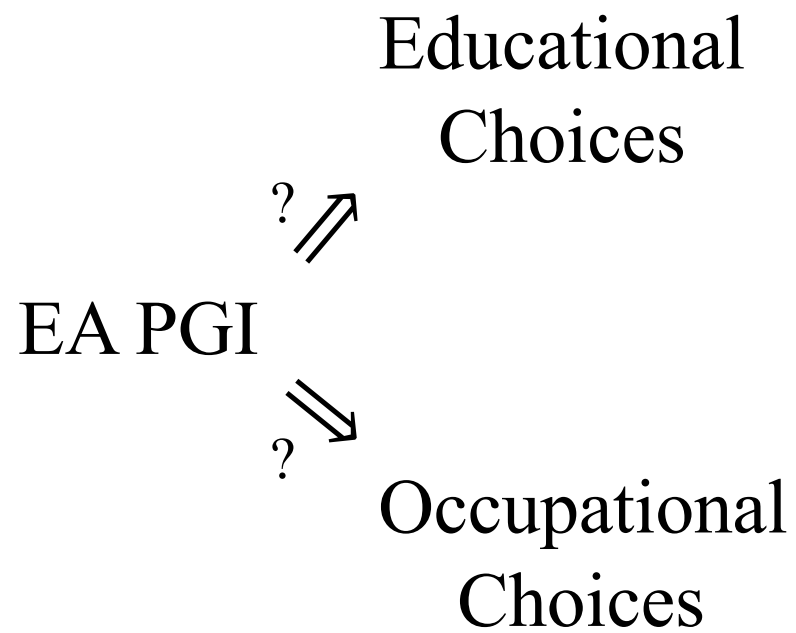

Occupational
Choices

EA PGI

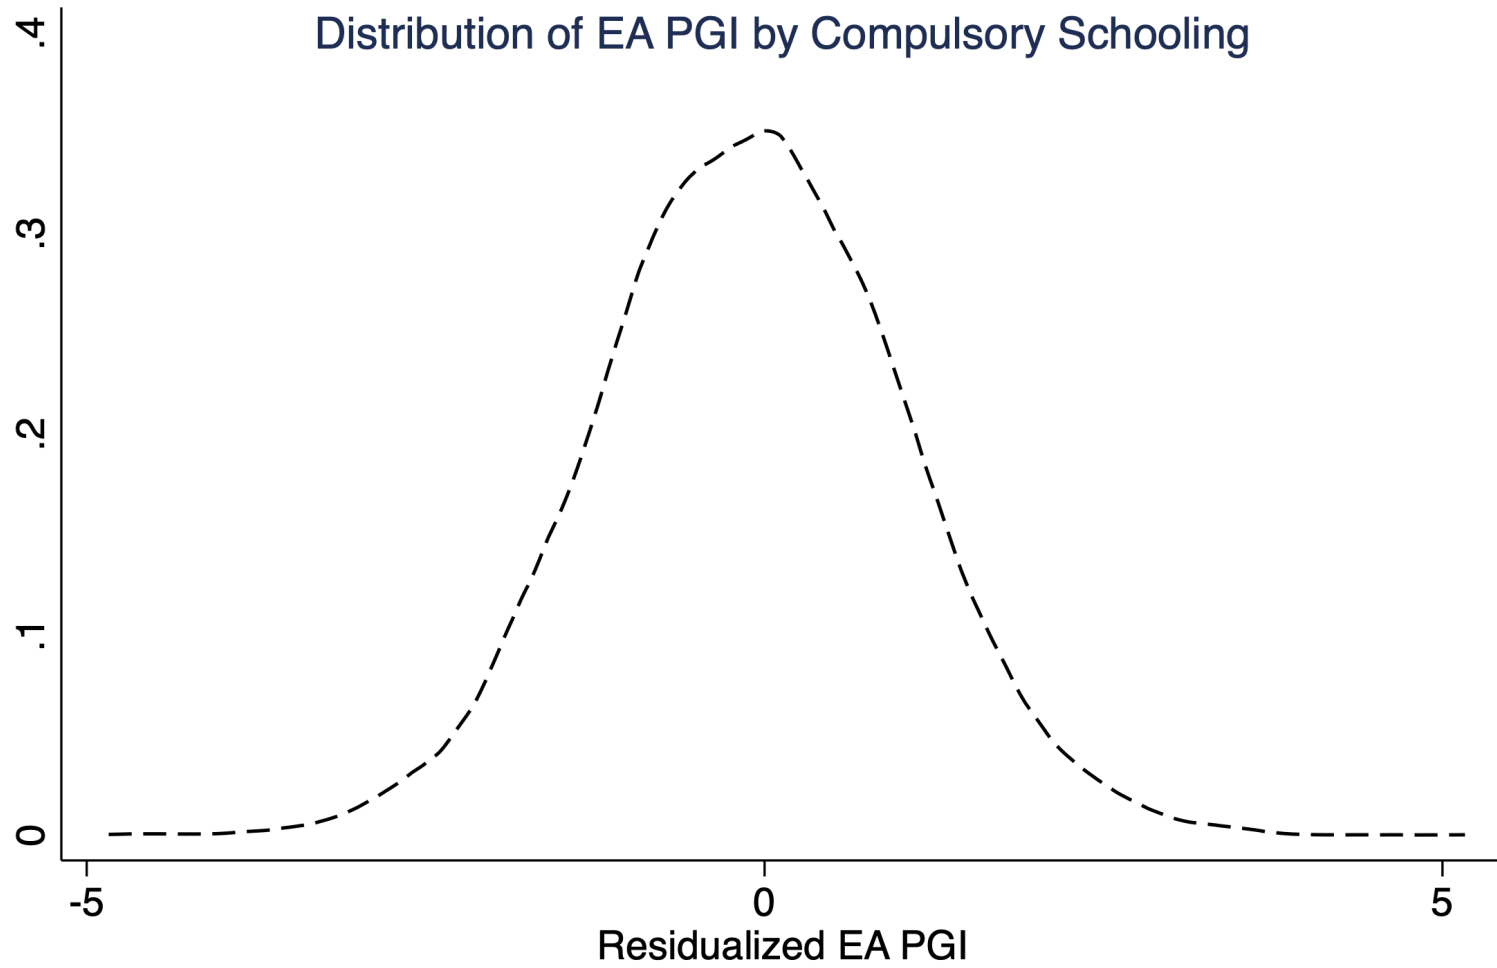

Income

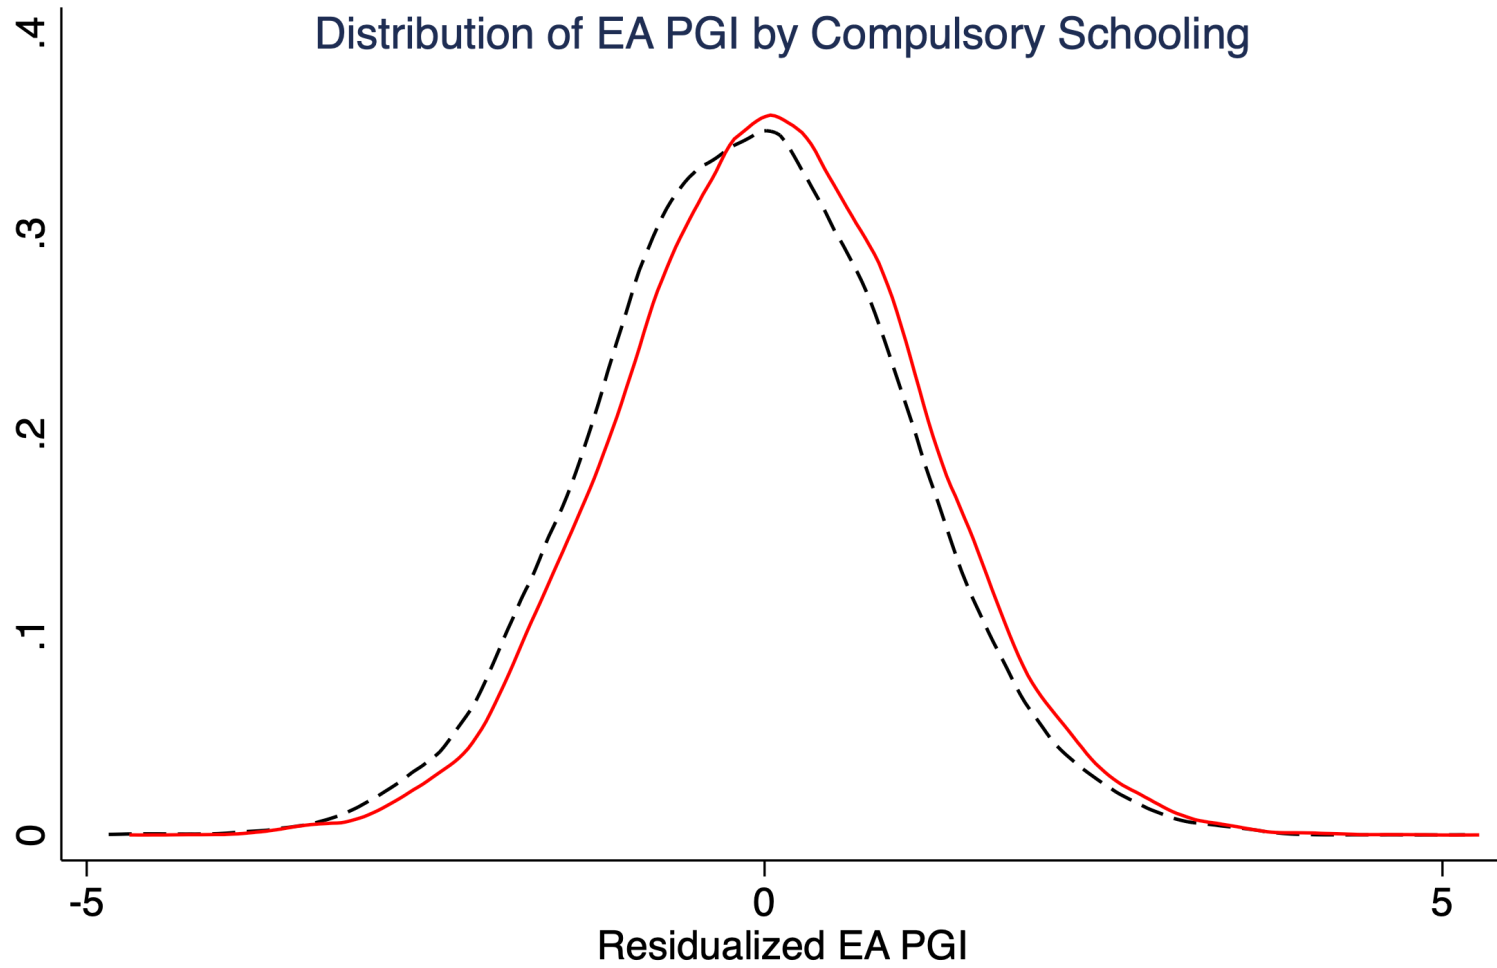

Distribution of EA PGI by Compulsory Schooling

----- Dropped Out at CSA

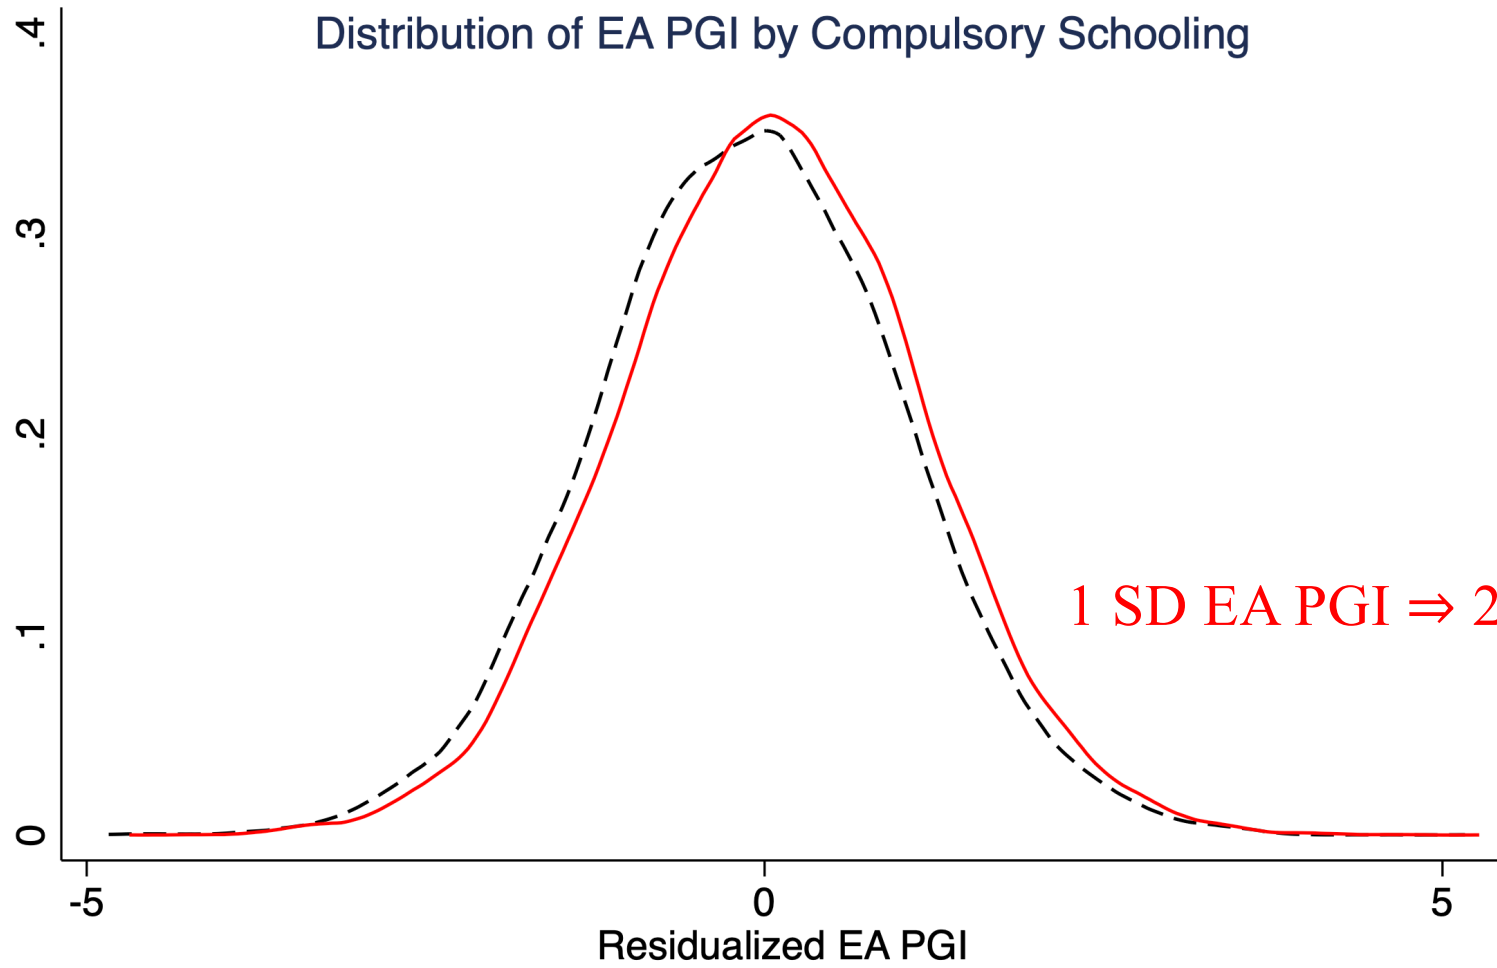

Distribution of EA PGI by Compulsory Schooling

----- Dropped Out at CSA

———— Stayed Past CSA

Distribution of EA PGI by Compulsory Schooling

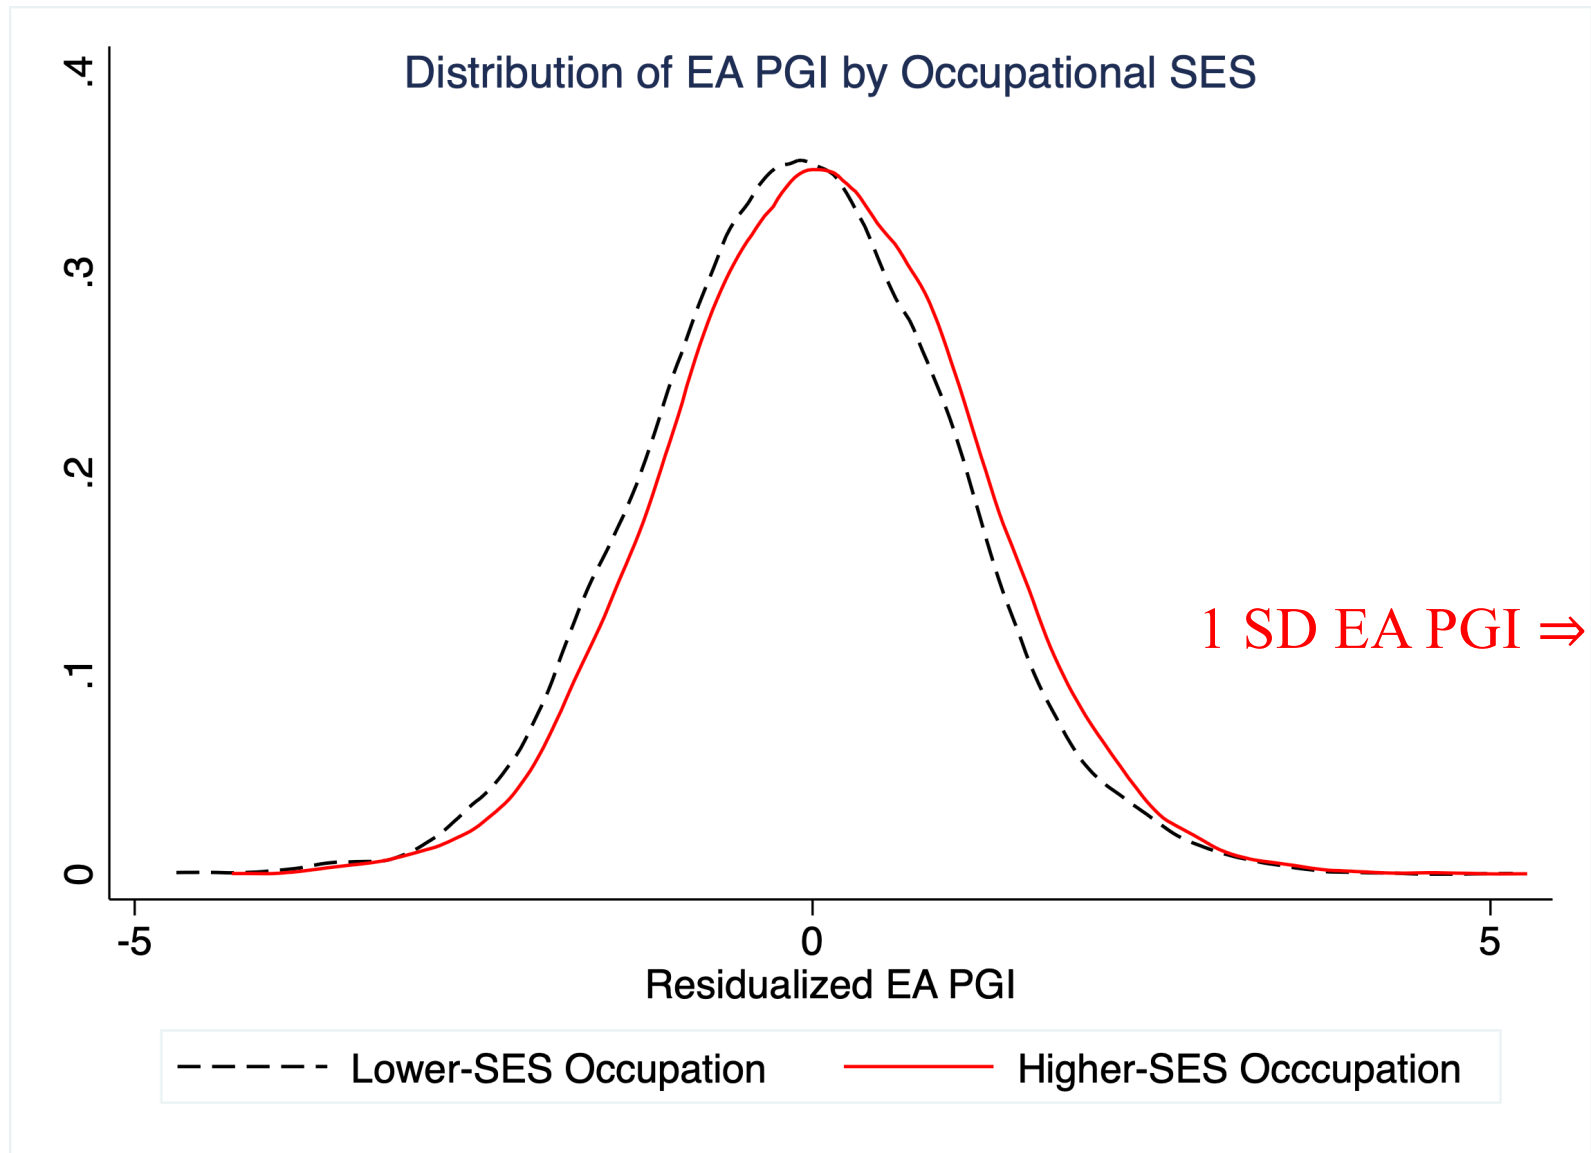

1 SD EA PGI \Rightarrow 2.7 p.p.

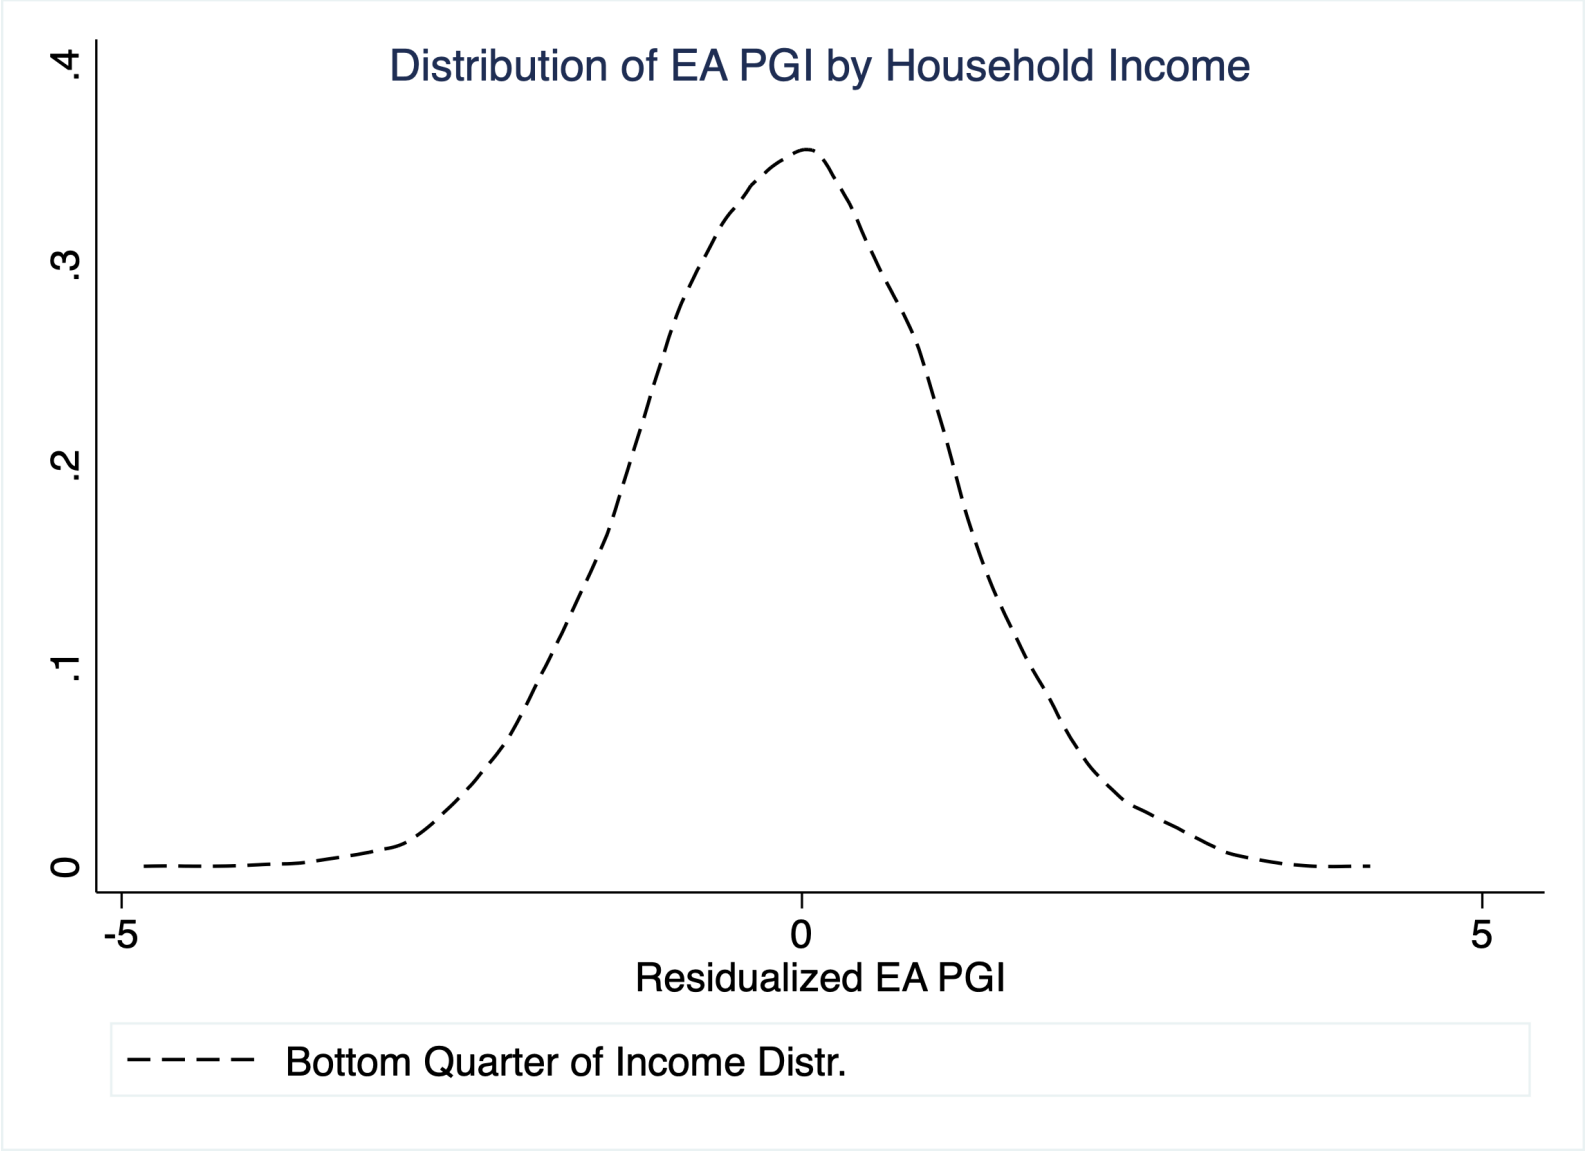

----- Dropped Out at CSA

———— Stayed Past CSA

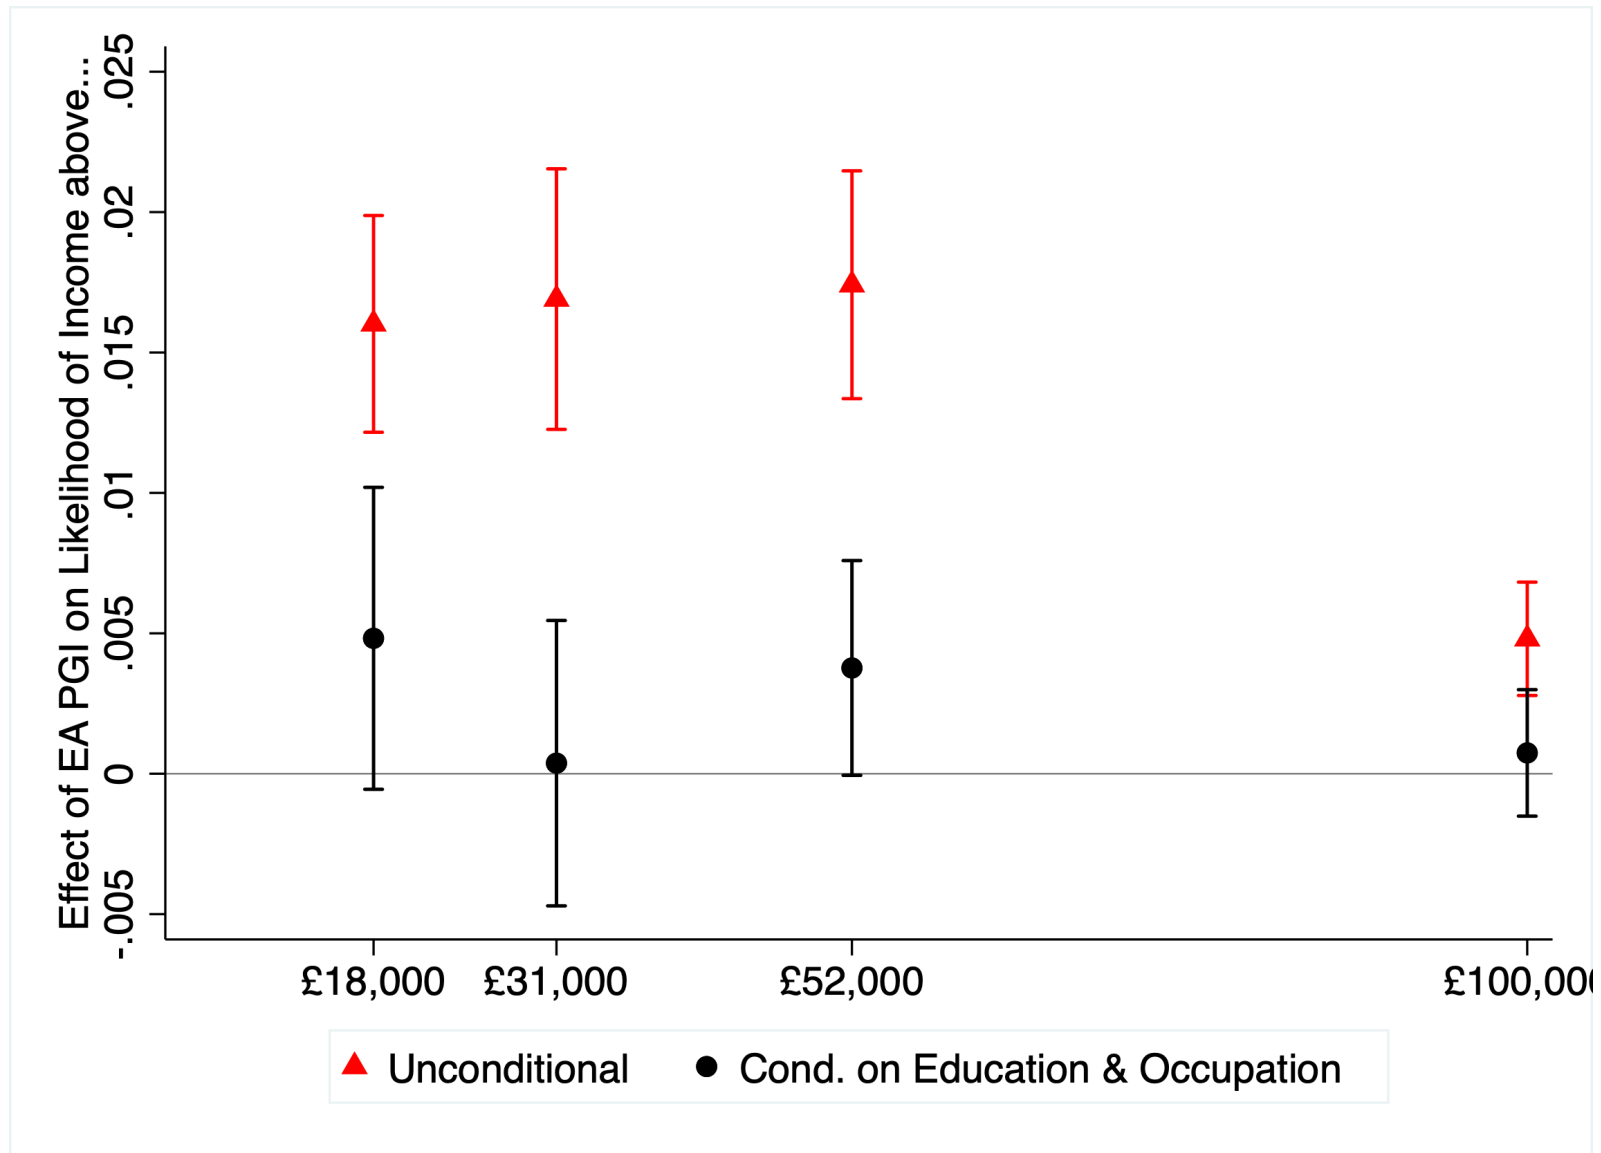

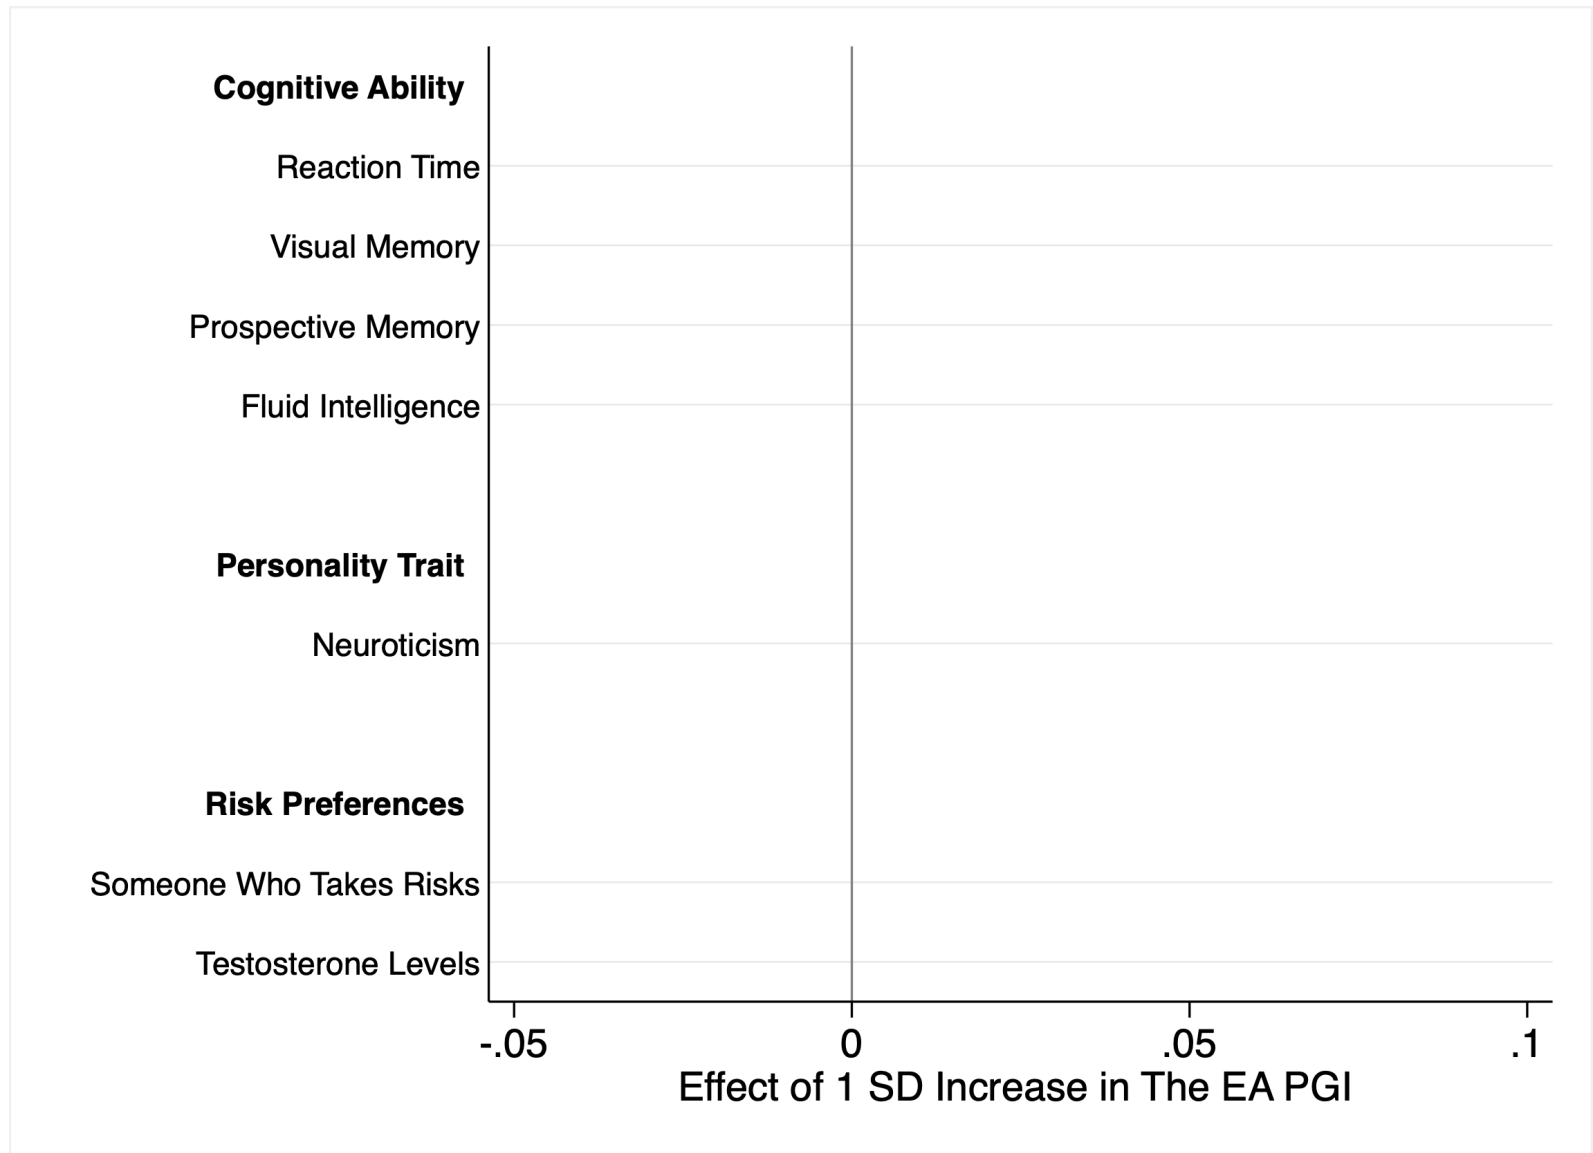

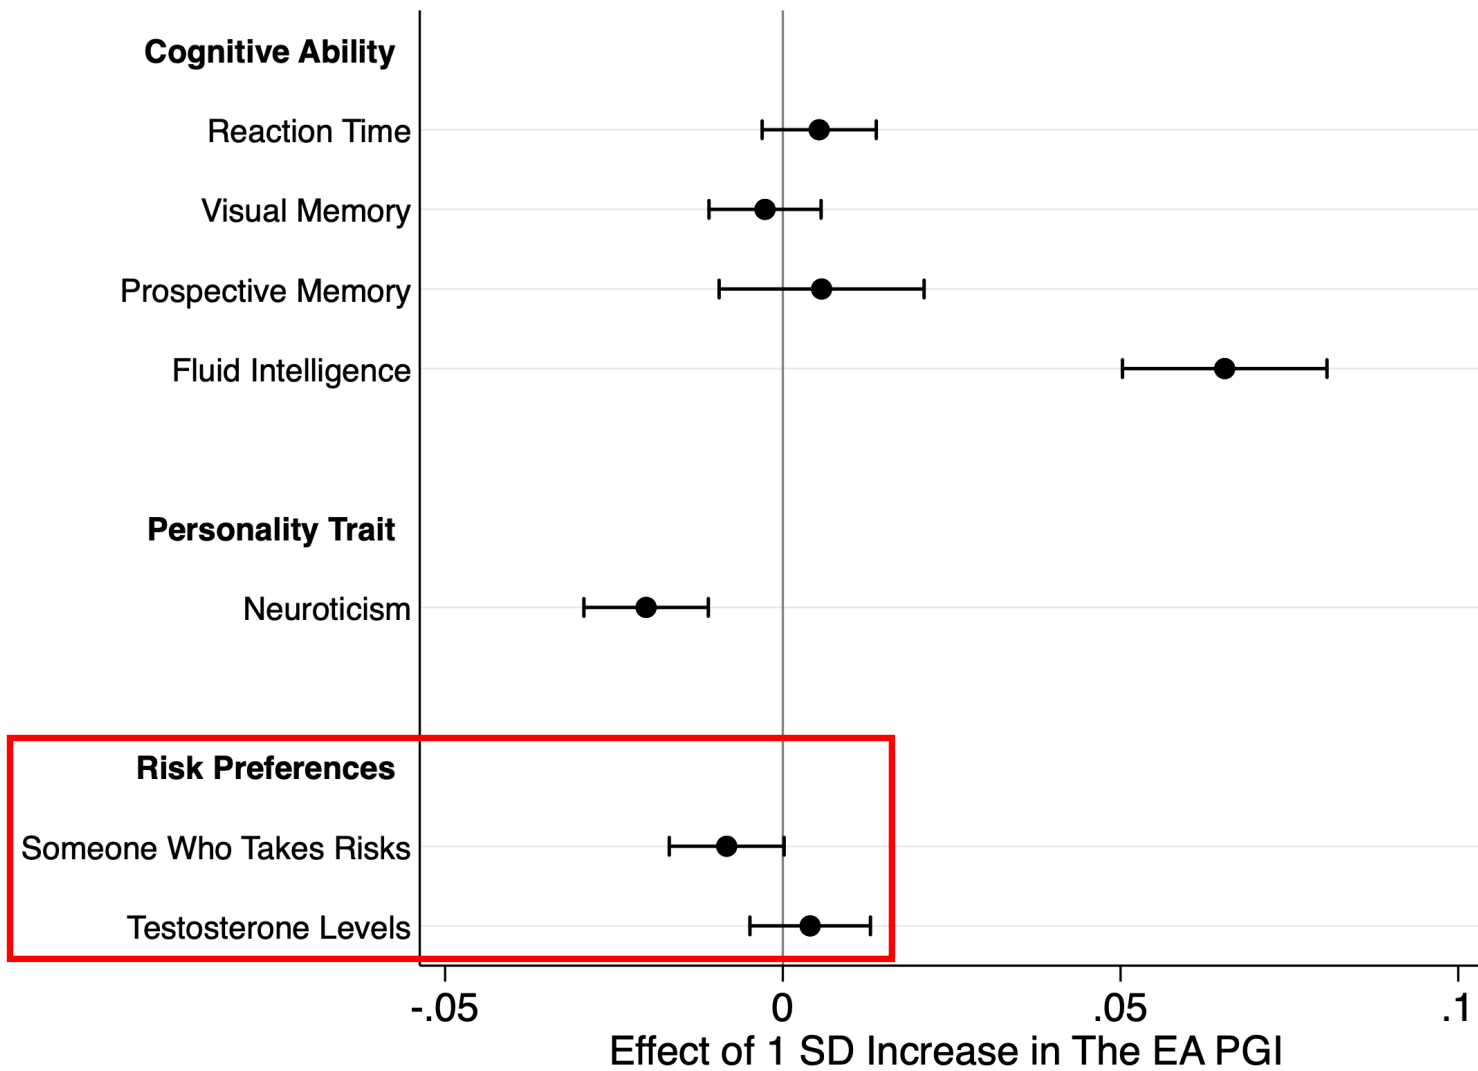

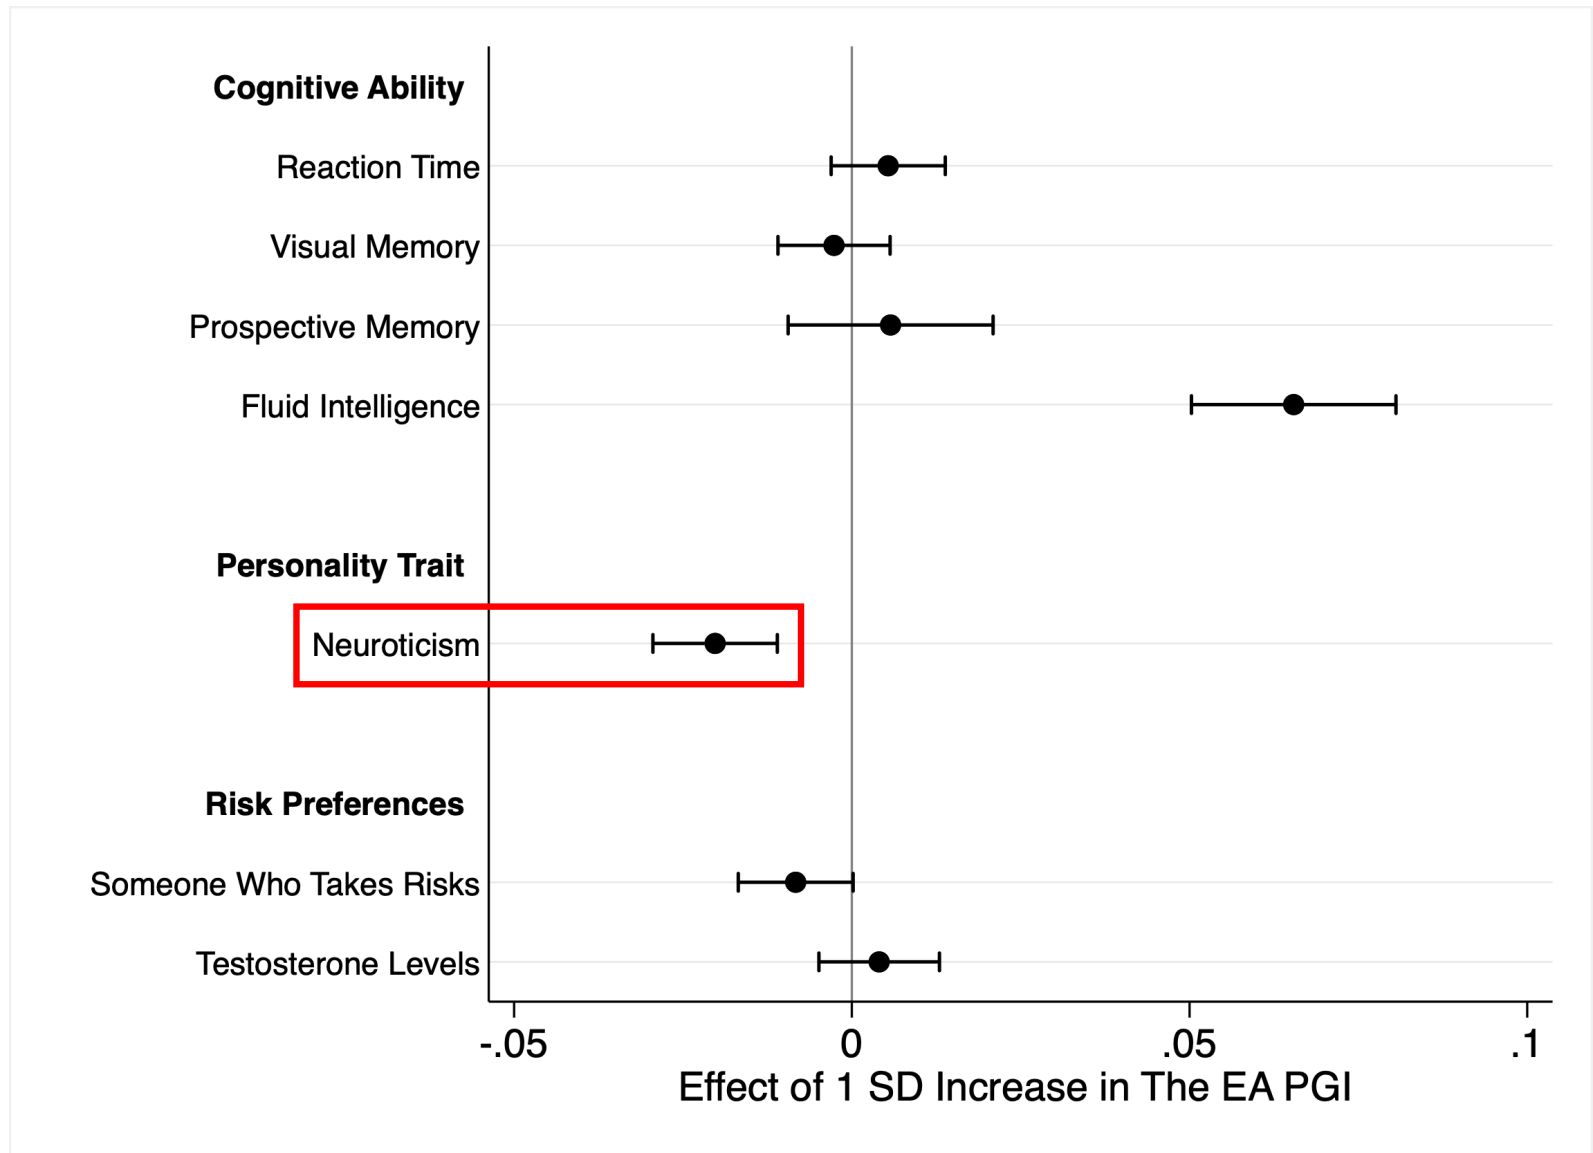

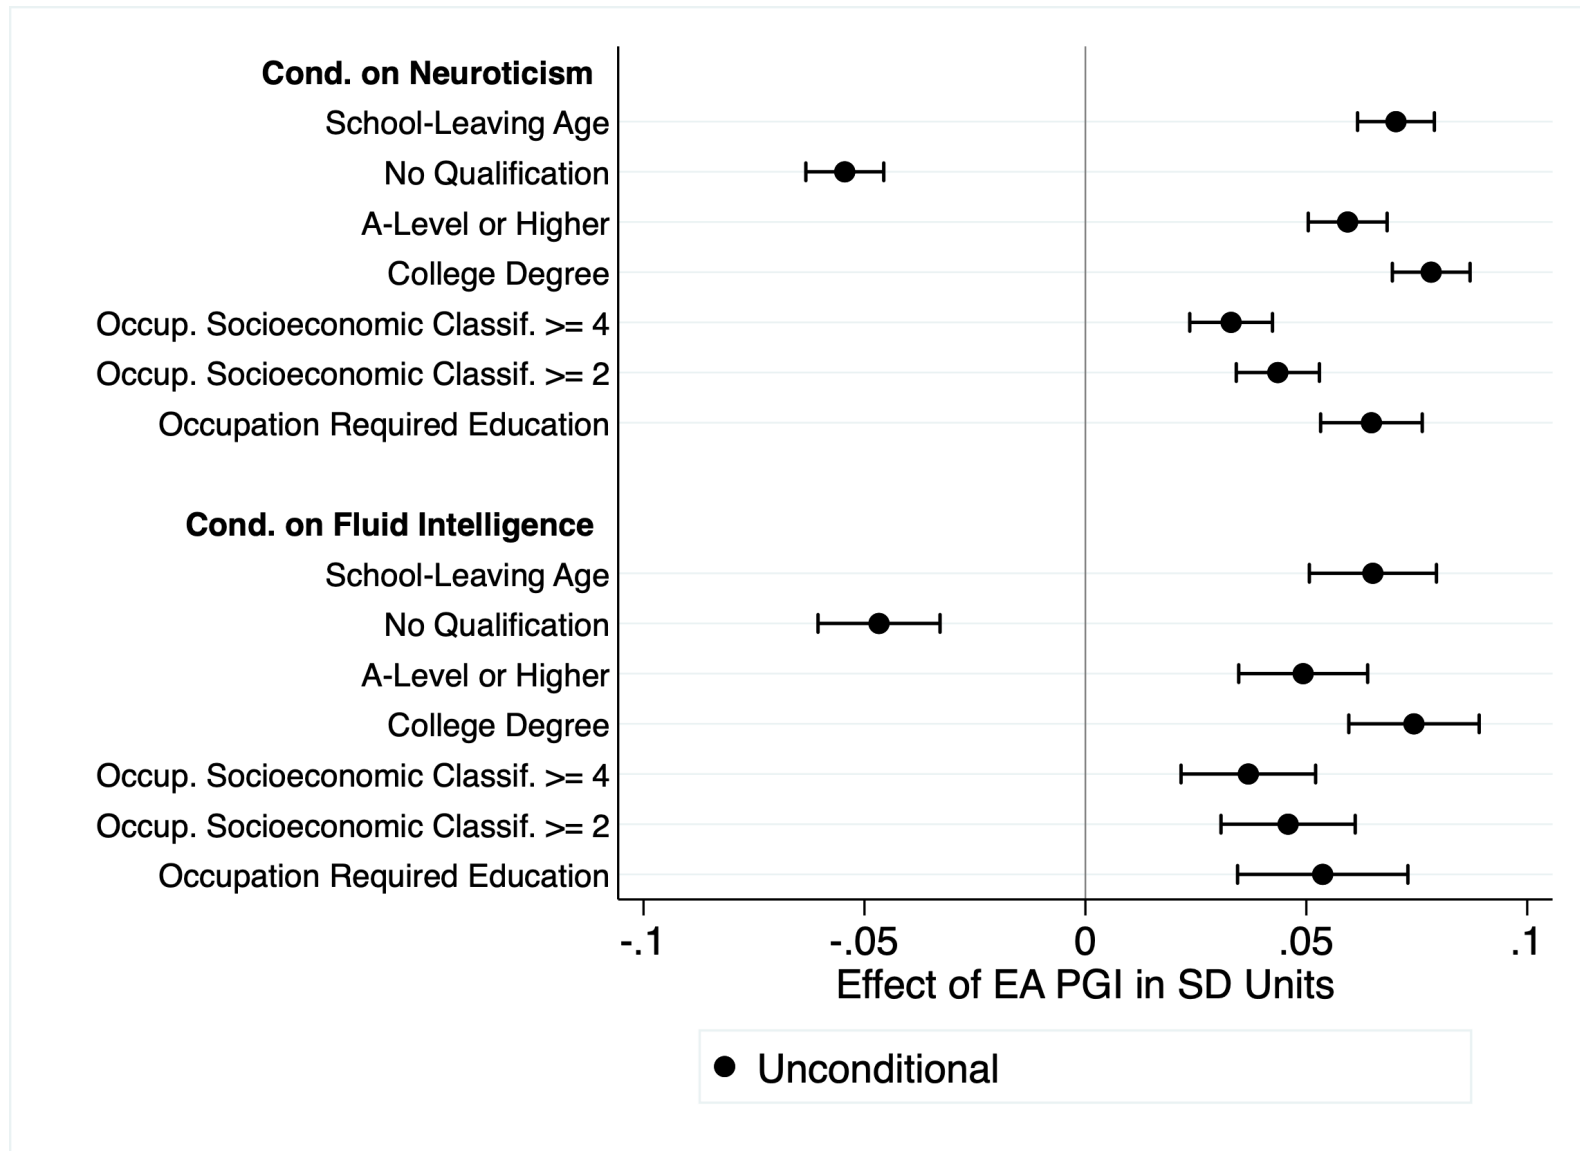

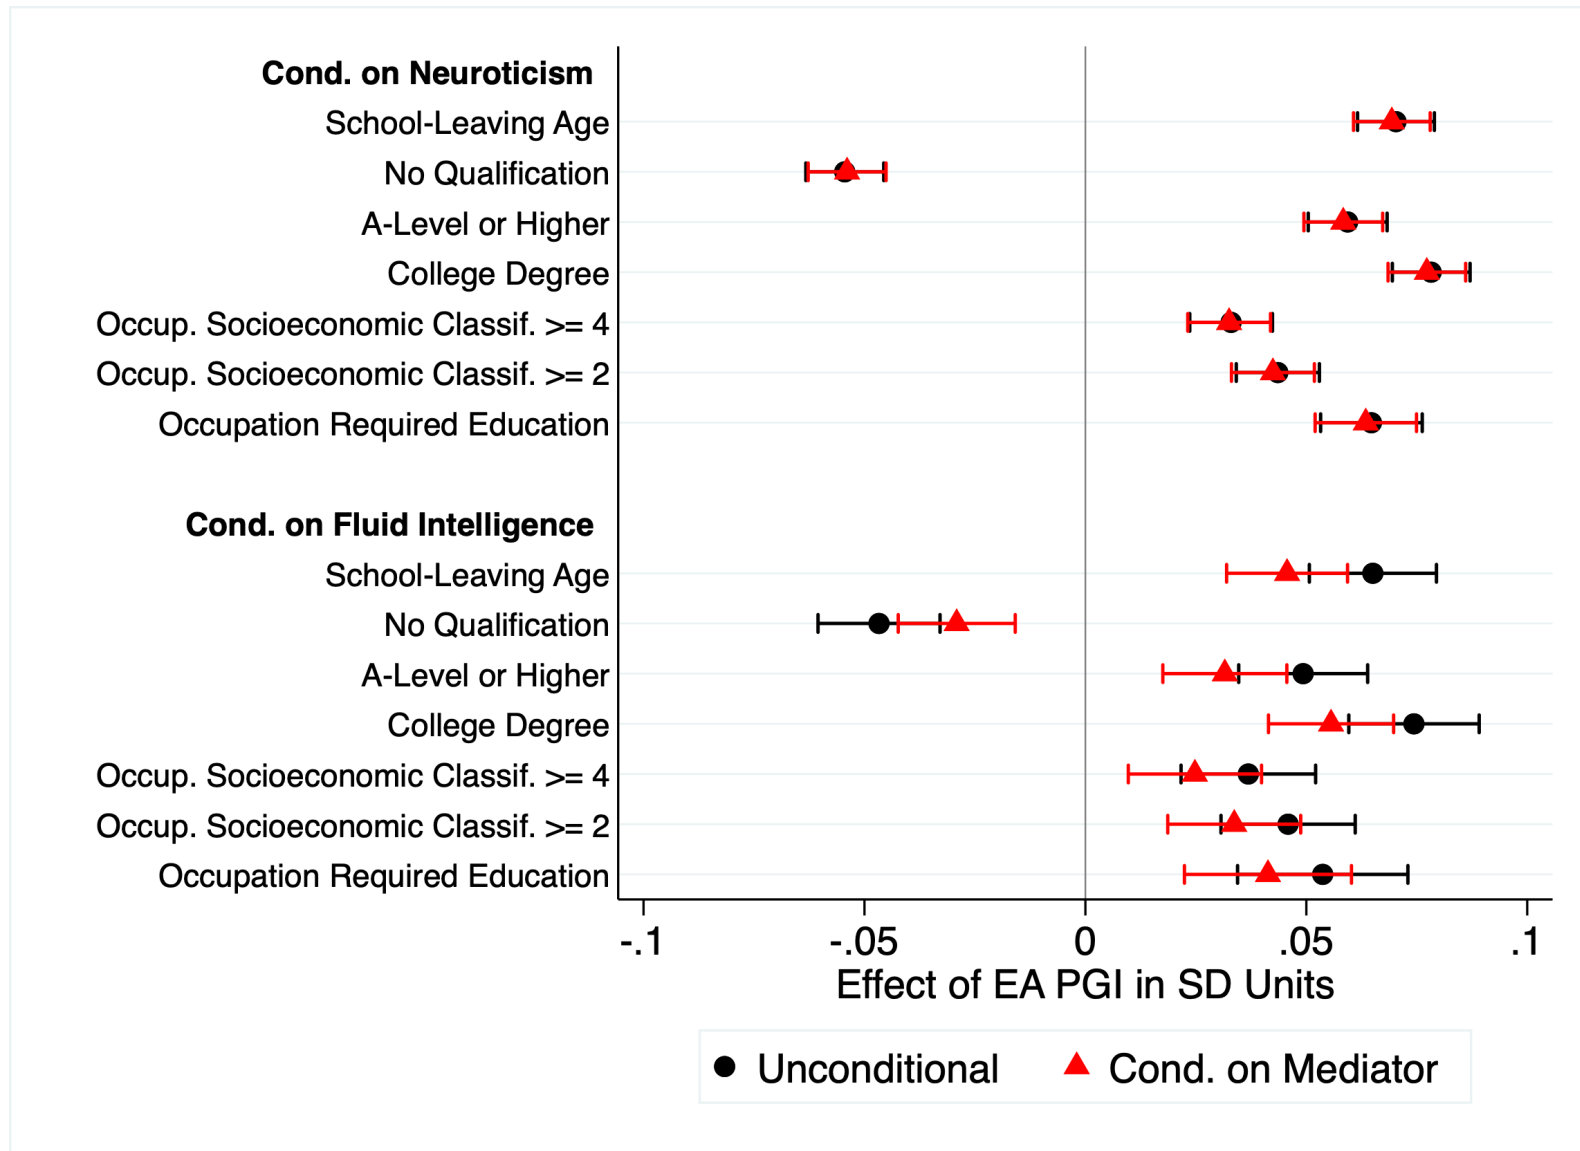

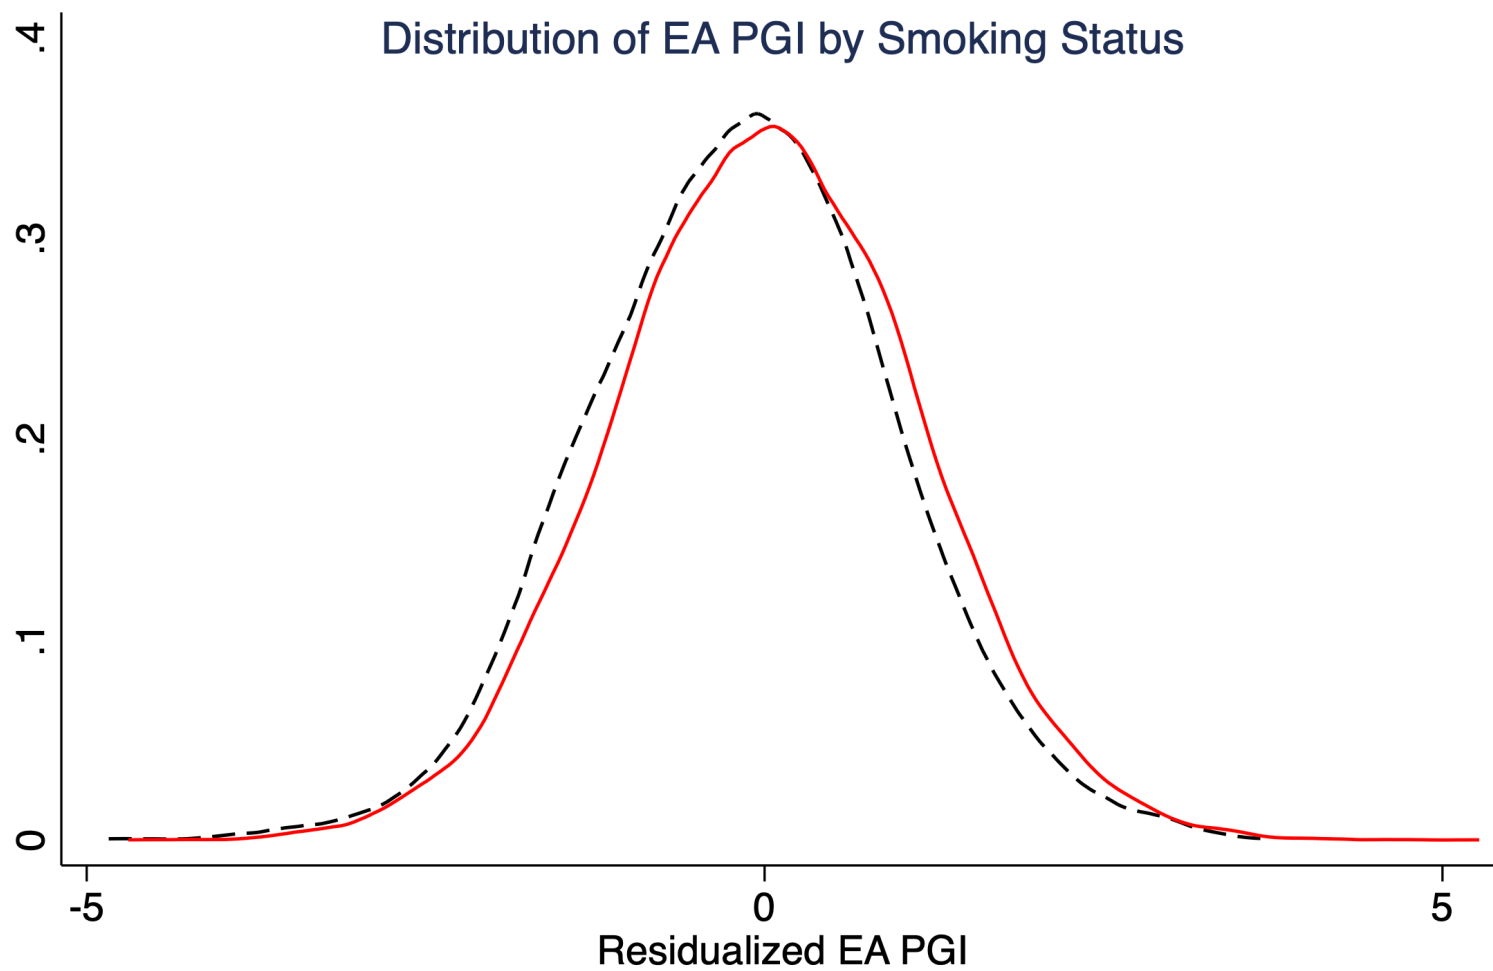

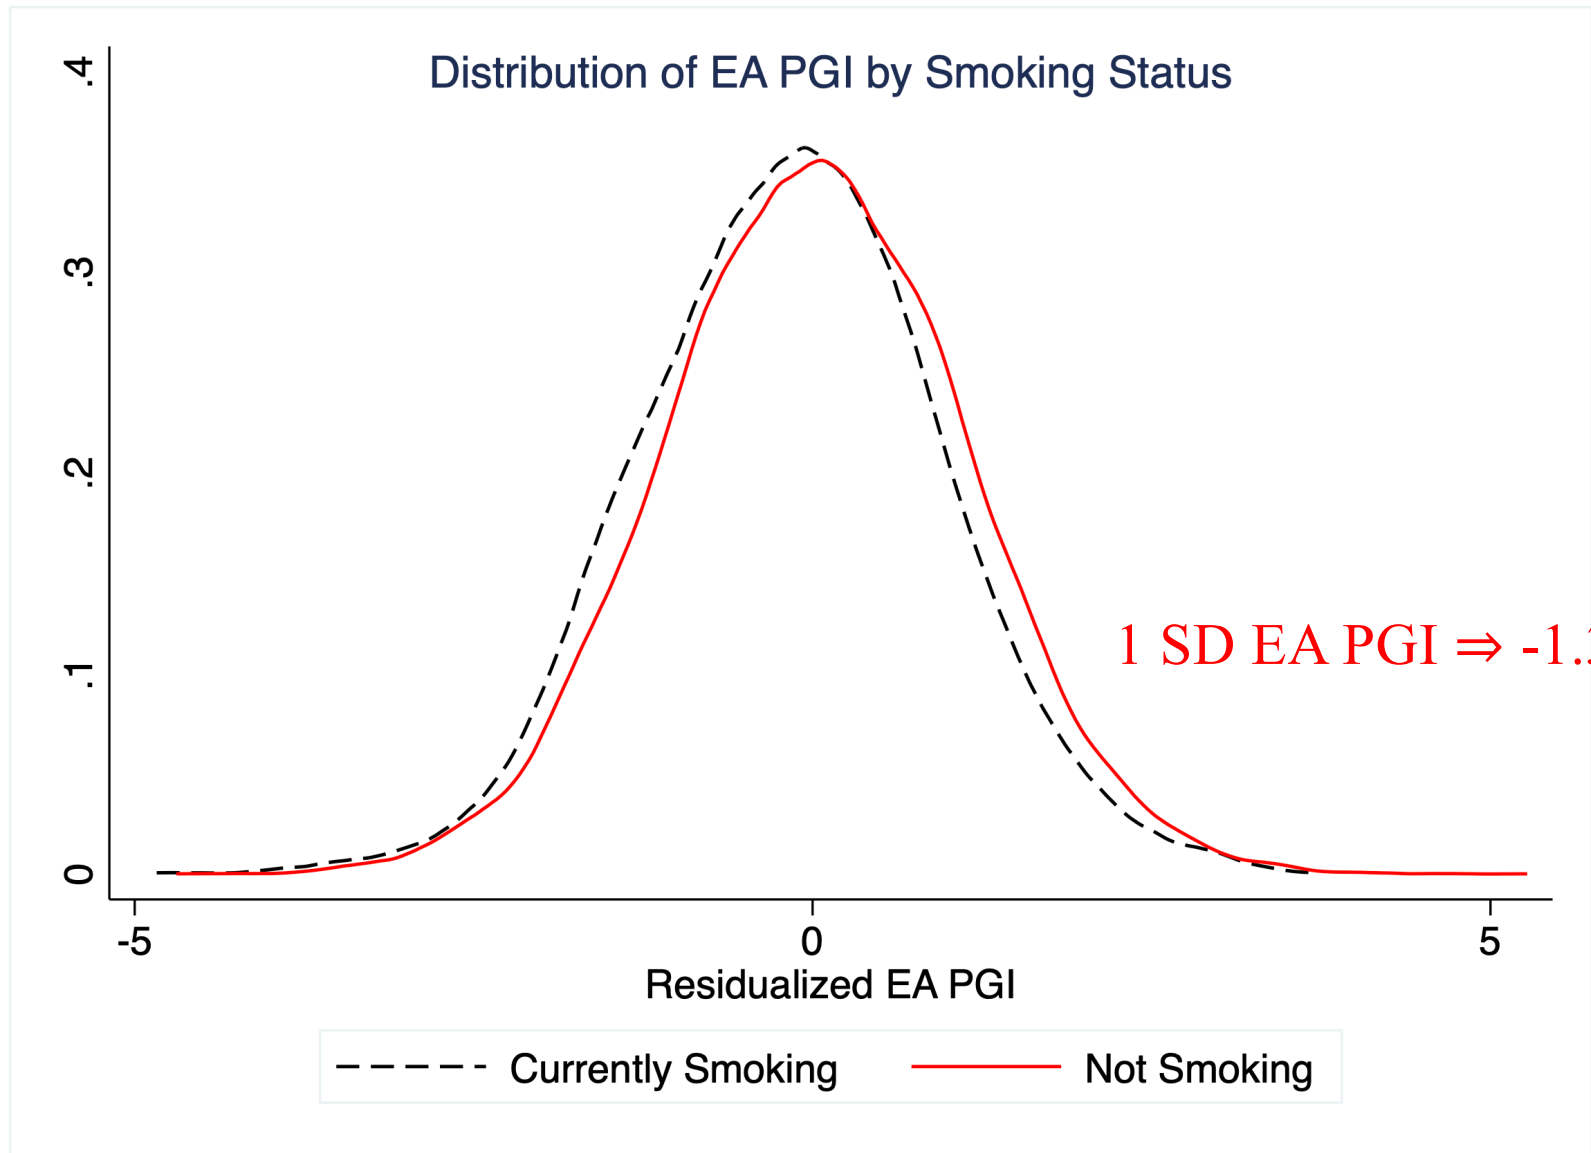

Distribution of EA PGI by Smoking Status

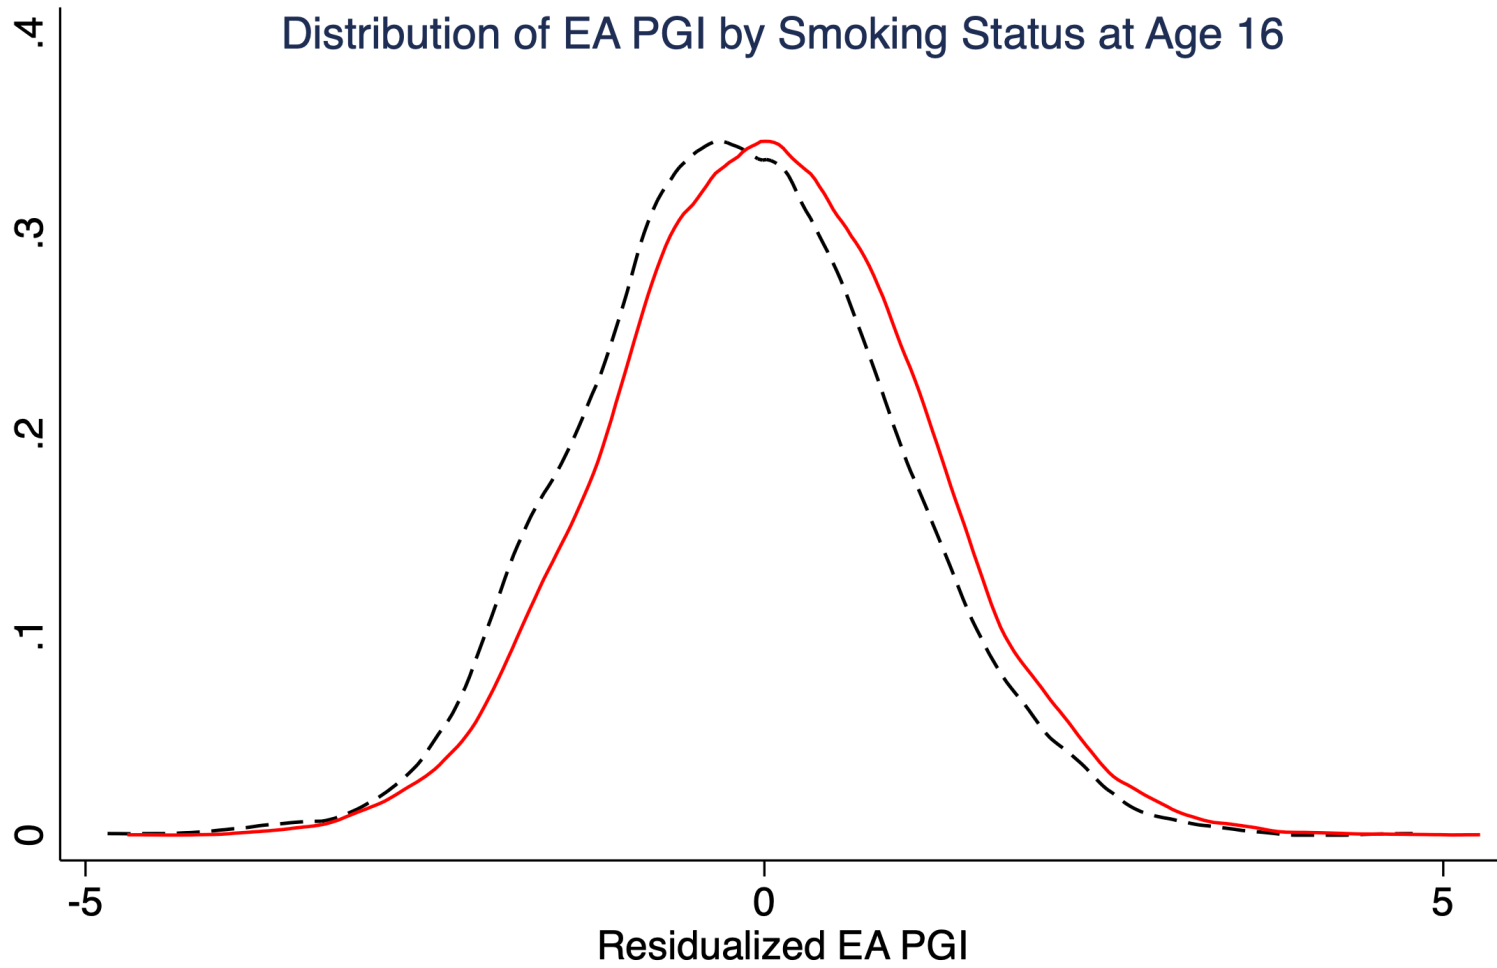

----- Currently Smoking

— Not Smoking

Distribution of EA PGI by Smoking Status at Age 16

----- Started Smoking at Age 16 or Younger

— Everyone Else

Conclusion

Genetics affects educational and occupational choices and income

These choices mediate the relationship between the EA PGI and income

Suggestive evidence that fluid intelligence and present focus explain the effects of genetics on economic choices

Genetic effects are economically meaningful

Conclusion – Cont.

Effects of genetics on economic choices do not reflect fixed, biological relationships; they change with environmental conditions

“...claiming that genetic differences between people are meaningless does not make the power of the genome go away. Rather, failing to recognize the genetic lottery as a systemic force that creates inequalities does exactly what eugenic ideology would want—permits those genetically associated inequalities to persist as “natural” rather than being critically examined.”

(Harden 2021)
